ABSTRACT

The Los Angeles Unified School District has funded several innovative prevention/recovery programs to determine indicators that will help local schools identify the potential early leaver. This annual study for the 1983-84 school year examines the number of students in grades 10 through 12 who left school without a diploma. Findings cover all regular senior high schools, opportunity schools, and magnet school programs. Comparison data provided are based on the following: (1) sex, (2) grade, (3) age, (4) ethnicity, and (5) reason for leaving. Significant facts include the following: (1) the 10,555 early leavers represent a slight increase from previous years; (2) more than 60 percent of leavers left during the second semester; (3) most early leavers are male; (4) continuation high schools had the largest percentage of leavers; (5) magnet schools had the fewest leavers of all non-special-education programs; (6) the percentage of early leavers (8.1 percent) was the highest since the district began its studies; (7) "whereabouts unknown" and "overage" represent over 60 percent of early leavers; and (8) the number of early leavers at grade 10 is higher than grades 11 and 12. It is recommended that the district should train teachers and counselors to identify potential early school leavers and provide them with counseling services. Early prevention programs to help students before the 10th grade, presentation programs to help students before the 10th grade, and efforts to find students shortly after they leave school to encourage them back into an educational program are also suggested. Nine data tables are appended. (LHW)

**EARLY SCHOOL LEAVERS:
High School Students Who Left School
Before Graduating, 1983-1984**

ABSTRACT

This is an annual study for the 1983-84 school year. It examines the number of students in grades 10, 11, and 12 who left school without a diploma.

The findings in this study includes all regular senior high schools, opportunity schools, continuation high schools, and magnet school programs. The summary includes comparison data based on sex, grade, age, ethnicity and reason for leaving.

The significant facts are listed:

- The 10,555 early leavers for 1983-1984 number slightly more than in previous years.
- More than 60% of the leavers left during the 2nd semester.
- There are more male early leavers than female.
- Continuation high schools had the largest percentage of early leavers.
- Magnet schools had the least of early leavers of all non-special-education programs.
- This year's proportion of early leavers (8.1% of enrollment in grades 10-12) represents the highest percentage since the district began studying students who leave before graduating.
- "Whereabouts Unknown" and "Overage" represent more than 60% of the early leavers.
- The number of early leavers at grade 10 is higher than at grades 11 and 12.

Introduction

The relationship between years of schooling, employment, and quality of life is very significant in the American Society. Educators recognize the importance of staying in school and receiving a high school diploma. Yet, the early leaver remains a problem for California's schools and school boards.

State Superintendent of Schools Bill Honig has addressed the early leaver problem in California as one of its most serious educational shortcomings. Superintendent Honig's publication, "School Attendance Improvement: A Blueprint for Action," represents the State Department of Education's efforts to assist schools in bringing about a positive change in the holding power of our schools.

The Los Angeles Unified School District (LAUSD) has funded several innovative prevention/recovery programs to research indicators that will help local schools identify the potential early leaver.

The Research and Evaluation Branch and the Office of Assessment are seeking input from district staff in order to make the Dropout Prevention/Recovery Programs effective.

The nation's high schools have had a serious problem with a large number of students leaving school before graduation. During the past decade the number of early leavers has increased significantly. It is hoped that many students who leave during high school enter other training and learning programs and eventually complete their high school education and learn a salable skill.

The LAUSD has made a strong commitment to reduce the number of early leavers during the 1984-85 school year.

The following activities address the problem:

1. Research and Evaluation pilot study, summer 1984. Early leavers from 12 high schools were interviewed.
2. The State Department of Education's study on "Where did the Class of 1982 Go?"
3. Development of the Dropout Prevention-Recovery Program by LAUSD's pupil services and attendance office.
4. Research and Evaluation's publication of an Annual Early Leavers Study that compares the early leavers by grade, sex, ethnicity, and reasons.
5. The Superintendent's Task Force on Dropout Prevention headed by the Office of Reconfiguration and Assessment.

Purpose of the Study

This report will answer the following questions that may assist staff in reducing the early leaver numbers.

1. What differences are there in reasons for leaving school with respect to age, grade, sex, and ethnicity?
2. What is the relationship of early leaver rates from year to year?
3. Are the early leavers isolated in certain types of schools?
4. What percentage of the secondary school enrollment is classified as early leavers?

Procedures

The study of early leavers was approved by the Board of Education in 1979 and has been continued on an annual basis.

Early leavers are senior high students who left school before graduating because they were overage, began working full-time, were institutionalized, entered the military services, were pregnant, married, or were excluded for medical reasons, or whereabouts were unknown. District records code them as "L8s."

Each school month, schools send form 34-H-136 to Research and Evaluation Branch listing student transfers. The form contains 19 coded reasons why students leave school. Early leavers identified as L8's are used in this study. There are 132 schools with grades 10-12 providing leaver data (Table 1).

These schools are grouped into regular senior high (49), continuation (43), magnet (25), opportunity (8), and (7) special education schools (7). Results from these monthly reports are tabulated for comparison of early leavers by age, grade, sex, ethnicity, and reason.

Results

Incidence of Early Leavers, 1983-84

There were 130,356 students enrolled in grades 10-12 in October 1983. The number of early leavers for school year 1983-84 is 10,555 (8%), compared to 9,697 in 1982-83, (Table 1). There were 9,433 (7%) in 1981-82, and 9,866 (8%) in 1980-81. The historical perspective of early leavers in recent years is offered in Table 10, showing fractional variations from year to year.

Characteristics of Early Leavers

School Month and Type. Table 2 distributes leavers by school month and major type of school. Nearly 2/3 (64%) of all leavers departed during the 2nd semester, perhaps suggesting the crucial opportunities of 1st semester preventive remedies for teachers and staff.

Sex. Consistent with the number of early leavers for the past 5 years, males comprised the majority. The 1983-1984 figure is 60%. (Table 3)

Grade. The largest number of leavers appear for grade 10 (45.1%), with 28.9% from grade 11, and 25.5% from grade 12. (Tables 3 & 6)

Average Age. The early leaver in 1983-1984 was 17.7 years old. The oldest leavers were in special education schools and the youngest in magnet schools. (Table 4)

Ethnicity. Table 5 shows proportions of early leavers by racial-ethnic group. Leaver and enrollment proportions for the past 2 years show similar pattern, with minor fluctuations.

Reasons for Leaving

The seven major reasons for leaving early are overage (39%), whereabouts unknown (38%), institutionalized, full-time employment, marriage, medical exclusion, and military services. (Table 9)

Reason by Average Age. The overage leaver (4,115) was typically 18.7 years old. The whereabouts-unknown leavers (4,043) averaged 16.9 years of age. (Tables 4 & 7)

Other Reasons. Under the classification of Other, there are 522 early leavers. The five major reasons noted were excessive absences, in custody of parents, deceased, medical, and child care. (Table 7)

Reason by Sex. Female leavers outnumber male L8s in one major category (marriage). (Tables 7 & 9)

Reason by Grade. Again, as in previous years, 10th grade students accounted for the largest percentage of leavers and 12th graders the smallest. Their two major reasons for leaving are overage and whereabouts unknown. (Table 8)

Summary of Findings

1. The 10,555 students who left high school before graduating comprised 8% of the fall 1983 high school enrollment.
2. Regular high schools accounted for 7% (7,193) of leavers, and continuation high schools lost 61% (2,080) of their enrollment.
3. The 9th and 10th months recorded the largest number of leavers--64%
4. There were 22% more male leavers than female.
5. There were significantly more 10th grade leavers (4,761) than 11th (3,054) or 12th (2,693).
6. The average age of the 1983-1984 early leaver was 17.7 years.
7. Enrollment and leaver proportions in 1983-84 varied slightly from those in 1982-83.
8. Whereabouts Unknown was the reason most commonly noted for leaving early (38%).

Recommendations

1. The district should train all teachers and counselors to identify potential early school leavers. Potential leavers should be identified as early as possible, perhaps in elementary school.
2. Students identified as potential leavers should be provided appropriate instruction, counseling or what ever services needed to keep them out of remedial tracks thus preventing them from becoming early school leavers.
3. The district should study the reasons why males are more likely than females to leave school early.
4. Early leaver prevention programs should stress helping students before they enter the 10th grade.
5. Efforts should be made shortly after students leave school to find them and bring them back into an educational program that will help them earn a diploma.
6. Continuation and opportunity high schools offer specialty programs for potential early leavers. In 1983-84, continuation high school enrollment decreased by 61%, due to early leavers; for opportunity high schools, the figure was 42%. This pattern is consistent with earlier reports. Reasons and remedies for these losses need to be researched.
